SQL

SQL Constraint PRIMARY KEY

Constraints

NOT NULL

UNIQUE

PRIMARY KEY

FOREIGN KEY

CHECK

DEFAULT

Create Table

```
CREATE TABLE tablename (
        column1   datatype constraint ,
        column2   datatype constraint ,
        column3   datatype constraint ,
        ...
  );
```

```
CREATE TABLE   Employee (
        empid   int PRIMARY KEY ,
        name    varchar(255) NOT NULL ,
        age     int ,
        salary  float (9, 2)
  );
```

PRIMARY KEY

The PRIMARY KEY constraint uniquely identifies each record in a table.

Field which is PRIMARY KEY must contain UNIQUE values and can not contain NULL values

A table can have only one PRIMARY KEY

PRIMARY KEY can consist of single or multiple fields.

PRIMARY KEY

```
CREATE TABLE tablename (
        colname type,
        colname type,
        colname type,
        PRIMARY KEY (colname)
);
```

Name your constraint

```
CREATE TABLE tablename (
    colname type,
    colname type,
    colname type,
    CONSTRAINT constraintname PRIMARY KEY (col1,col2,..)
);
```

You can specify multiple columns.

PRIMARY KEY on ALTER TABLE

```
ALTER TABLE tablename
ADD PRIMARY KEY (colname);

ALTER TABLE tablename
ADD CONSTRAINT constraintname PRIMARY KEY(cols);

ALTER TABLE tablename
DROP PRIMARY KEY;

ALTER TABLE tablename
DROP CONSTRAINT constraintname;
```
